## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior art (US 2007/0024507 A1, Specification, paragraphs [0005, 0006]) in view of Brown (US 5,764,194).

As to claims 1, and 2, Prior art teaches an antenna device comprising a plurality of antennas connected to a radio module through respective cables, the radio module being capable of selecting one or more of the antennas in good communication conditions, wherein a movable case is pivoted to a base case through a joint, and the radio module is contained in the base case, while the plurality of antennas are disposed in the movable case, the plurality of cables extending from the plurality of antennas being tied in a bundle to pass through a through hole provided in the joint, and being connected to the radio module; wherein the joint comprises a pivot portion projecting from one of the base and movable cases, a spherical portion provided on an end of the pivot portion, and a sphere receiving portion provided in the other case, to which the spherical portion fits so as to rotate freely, the through hole penetrating through the pivot portion 31 and the spherical portion to open to an inside of the one case and to an inside of the other case see paragraph [0005, 0006]. It is noted that Prior art does not

explicitly teaches that the joint is the three-dimensional joint. However, Brown teaches such three-dimensional joint is widely used in the art see Brown (figure 1, and column 3, lines 9-20). It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide Prior art's three dimension joint, as taught by Brown because both of their system is directed to antenna system.

## Inquiries

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Huedung Mancuso whose telephone number is (571) 272-1939. ·

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Douglas Owens, can be reached on (571) 272-1662. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

4. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
